

FIREM was established almost 40 years ago and is a specialist property investment, property management and property development company operating through the UK in all sectors.

The business currently owns and manages over 10M sq ft of commercial property and is involved in promoting several major development projects, many for mixed uses, but most in the employment and commercial sectors. They execute a complete strategic service to achieve the company's overriding goal: to leverage commercial property with the aim of further driving the success of their clients.

FI Real Estate Management (FI-REM) has appointed DMWR Architects and supporting consultants to develop design proposals for a high-quality industrial development at Peblig Industrial Estate, Caernarfon.

Since 1963 DMWR Architects have been delivering pragmatic and quality architecture, now based over three offices in London, Manchester and Hertfordshire.

The experience of the practice extends across 8 sectors of expertise including, but not limited to, student accommodation, aviation, industrial and residential. Thus, however complex the idea, DMWR focus on achieving simplicity whilst being mindful of cost and time to suit the Client's requirements.

Wardell Armstrong is a multi-disciplinary Environmental, Engineering, and Mining consultancy providing a broad range in services to the Infrastructure & Energy, Property & Development, and Mining & Minerals Sectors. They have a history going back over 180 years and a reputation for high quality service in the UK and internationally.

Plan Red is a newly created niche planning consultancy set up by John Francis and Richard Purser that acts for private sector clients mainly, operating in the field of property development including major mixed use, commercial, retail and residential developments throughout the UK from its base in Manchester.

Prime Transport Planning is a focused team with big-brand credentials, providing all the rigour of a large organisation with none of the corporate hurdles. Deliberately structured for better, more agile and more cost-effective problem solving, we draw from a range of knowledge and experience for sustainable placemaking.
